

SPEEDWAY

TA90 Airtite

Pneumatic capper

The Speedway Airtite is a pneumatically operated hand-held cap tightener capable of tightening container caps in diameters from 15 to 100 mm. Available with a floor stand, bench stand or by itself for attachment to an existing support. It is efficient, simple to operate and trouble free. With the torque arm, an operator can achieve amazing speeds with a minimum of fatigue. With a simple air hook-up, all the capping requirements for a medium-sized company can be met. Equally important, the cap tightener is the ideal standby in case of failure of your stationary capper. The Airtite comes complete with an air motor, balancer, F.R.L. with gauge, 10' coiled tubing and fittings.

Ask about chucks and liners to suit your needs.
